

ControllerBase

```
classDiagram
    class ControllerBase
    class EmployeeControllersValidateUserValidateUserController["Employee.Controllers.validateUser.ValidateUserController"]
    EmployeeControllersValidateUserValidateUserController --|> ControllerBase
```

The diagram illustrates a class hierarchy. At the top is the 'ControllerBase' class, represented by a rectangle divided into three horizontal sections. The top section contains the class name, while the middle and bottom sections are empty. Below it is the 'Employee.Controllers.validateUser.ValidateUserController' class, represented by a shaded rectangle divided into three horizontal sections. The top section contains the full class name, the middle section is empty, and the bottom section contains a public method '+ CheckSessionStaff()'. A blue arrow with an open triangular head points from the top of the lower class to the bottom of the 'ControllerBase' class, indicating inheritance.

Employee.Controllers.validate
User.ValidateUserController

+ CheckSessionStaff()
