

ControllerBase

```
classDiagram
    class ControllerBase
    class RentalController["WPR.Controllers.Customer.Rental.RentalController"]
    RentalController --|> ControllerBase
```

The diagram illustrates a class hierarchy. At the top is the 'ControllerBase' class, represented by a rectangle with three horizontal compartments. The top compartment contains the class name. Below it are two empty compartments. A blue arrow with an open triangular head points upwards from the 'RentalController' class to the 'ControllerBase' class, indicating that 'RentalController' inherits from 'ControllerBase'. The 'RentalController' class is shown in a larger box with a grey background, divided into three sections: the top section for the class name, the middle section for private attributes, and the bottom section for public methods.
